TWO WAY ROAD

TWO WAY ROAD

GOALS – Science & Technology

- **Sensor-based agricultural data management**

⇒ MODELS, METHODS, ALGORITHMS

⇒ MANAGEMENT, INTEGRATION, ANALYSIS, VISUALIZATION

- **Wireless data communications in rural areas**

⇒ INFRASTRUCTURE, PERFORMANCE

GOALS – Social Impact

- **Decision support in agriculture**
⇒ MODELS + SOFTWARE TOOLS

- **Wireless data communications in rural areas**
=> LOW COST SOLUTIONS

Project members

- Four computer scientists
 - Databases, image processing, networks, interoperability
- Three agro-scientists
 - Remote sensing, precision farming, soil management
- One (very) large coffee cooperative
 - 12,000 farms
 - Three states

Results – Science & Technology

- Technology (networks and prototypes)
 - Communications infra
- Research
 - Models for yield forecasting
 - MSc & PhD research (Paper drafts)
 - Image processing
 - Satellite image segmentation using GP (2 papers)
 - Databases
 - Time series mining (1 journal paper submitted)
 - Content annotation (1 journal paper + 1 PhD workshop)

RESULTS

PUBLICATIONS

- C. D. Ferreira, J. A. Santos, R. S. Torres. **A genetic programming approach for relevance feedback in region-based image retrieval systems.** Proc SIBGRAPI, Oct 2008
- O. A. B. Penatti, R. S. Torres. **Color descriptors for web image retrieval – a comparative study.** Proc SIBGRAPI, Oct 2008
- C.G. Macário, C. B. Medeiros, **A Framework for Semantic Annotation of Geospatial Data for Agriculture.** Int. J. Metadata, Semantics and Ontology, Accepted for publication
- C.G. Macário, C. B. Medeiros. **Specification of a Framework for Semantic Annotation of Geospatial Data on the Web.** ACM-GIS 2008 PhD workshop
- L. Mariotte, C. B. Medeiros, R. S. Torres. **TIDES – A new descriptor for time series oscillation behavior.** Submitted to Geoinformatica.

Results - Networks

From sensors to Internet

Phase 1

- Laboratory experiments

Phase 2

- Temperature sensor to base (antenna at 5,8GHz, stability tests)

Phase 3

- Sensor -> base -> “farm” -> Internet

Phase 4 (ongoing)

- Extend to 3 “farms”, 3 sensor types

Phase 1 – Lab Tests

Phase 2 - Antennae

An aerial photograph of a large building complex, likely a university or government facility. A blue location pin is placed on a central building with a dark roof. A white callout box is attached to the pin, containing text about a temperature reading. The surrounding area includes other buildings, parking lots with cars, and greenery.

Temperature in LIS

Last temperature sensor reading in LIS was: 25.89
Celsius at 2008-09-19 17:20:23-03:00

Phase 4 – 3 “farms” in 2009

Research challenges

Directions

- In the domain (agricultural sciences)
- In CS (databases, networks, image processing, software engineering)
- A combination of both

Challenges in the domain

- **MODELS**
 - How to describe crop behavior
 - How to describe physical, husbandry environment
- **DATA**
 - Which data to collect, and how
- **DECISION SUPPORT**
 - How to influence future
 - How to interpret and adapt models

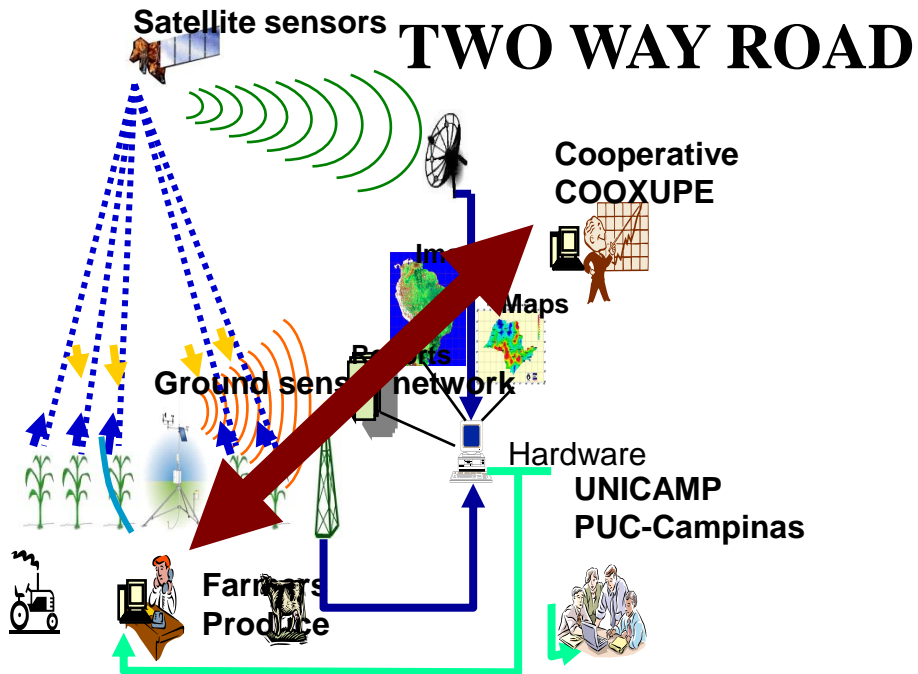

Challenges in CS

- Data heterogeneity
 - Spatio-temporal scales, sampling, devices, purposes, collection methods
- Image processing
 - Classification, segmentation
- Retrieval mechanisms
 - Mining, provenance
- Sensor network management - QoS

Challenges in CS + domain

- Domain requirements -> new algorithms
- Model management
- Decision support
- Requirements eliciting
- Testing

Summing up

Technological results
